

Enrich - New Zealand Trials

Name:	Autumn	Winter	Spring	Summer	Total (kgs/DM)
Enrich	646	1460	4251	2522	8879
Bolta	1309	1404	4050	380	7144
Lightning	671	1375	3781	606	6432
Goulburn	852	1293	3630	503	6278
Denmark	733	1326	3634	467	6160

Trial Description: This trial was conducted on an irrigated sheep and beef farm in Canterbury.

Trial summary:

- Enrich was slower to establish than the balensa and sub clovers however caught up very quickly. From winter until the end of the trial Enrich out yielded all within the trial. Its overall yield advantage at the end of the trial was.
- Enrich v's Bolta balensa 28%.
- Enrich v's Lightning Persian 39%
- Enrich v's Goulburn sub clover 41%
- Enrich v's Denmark sub clover 43%
- From this trial we can clearly see Enrich's improved winter, spring and summer performance.
